

WHAT IS KNOWLEDGE?

HOW DO HUMANS PRODUCE KNOWLEDGE?

IS IT POSSIBLE TO SET A NORMATIVE VALUE TO KNOWLEDGE?

WHY?

KNOWLEDGE

Knowledge is the name given to the product arising from the relationship established between the knowing entity, that is, the subject (subject), and the known entity, that is, the object (object). In other words, the subject (subject)'s interpretation of the object (object), making a judgment about it or making an explanation is called knowledge.

We have the chance to reach information by making the distinctions that a priori knowledge is innate knowledge and a posteriori knowledge is knowledge acquired through experience.

Information actually has no value parameters. This is due to how much we know, rather than a lack of criteria. How much do we know that we make the assumption that knowledge is valuable. Who decides what is important or unimportant?

"I know that I know nothing"
-SOCRATES
